April 29, 2014 (Tuesday), 9:00 AM – 10:00 AM

College Hall, Room 204

**Speaker:** Christine Potenza

**Title:** Enterprise Information Services Student Position

**Abstract:** Working in the Enterprise Information Services Unit has provided me with hands on learning in a professional environment. I have worked on various projects including transforming paper forms into webpages, modifying existing code to meet the needs of the clients, and designing efficient webpages that best incorporate the client’s specifications.

The Enterprise Information Services Student Position has involved me working with a team of information technology professionals on enterprise applications. I have been exposed to real world experience with respect to collaboration and working with a team to coordinate efforts developing, implementing and supporting information systems and computer applications which enable and assist the University in providing information services to students, faculty, staff, alumni and outside agencies.

The projects which will be presented, involved me using a combination of the following:

- Adobe Dreamweaver CS6
- Toad for Oracle 12
- Programming with a hybrid of ColdFusion, JavaScript, Ajax, HTML, CSS
- Querying Oracle databases using SQL
- Building applications on the university's test server

**Short Biography:** Christine is a graduating senior of the Computer Science Department at William Paterson University. She has been a member of Upsilon Pi Epsilon, the Honor Society of Computing Science, since her junior year. In addition to her internship with the EIS unit, she has performed an independent study throughout her last semester learning the scripting language Lua and creating a mobile app using Corona SDK.

All are welcome.
